Abstract (en)

[origin: WO2015015135A2] A device (1) for remotely controlling at least one medical apparatus (2) with or without contact, comprising a device (5) for projecting a graphical interface (8) onto at least one receiving surface (9), a device for locating objects (6) in order to detect a movement of at least one object (10) in at least one capturing area (11), and a device (7) for communicating with at least one medical apparatus (2), in order to transmit a predefined command to said at least one medical apparatus on detection of said movement. The at least one receiving surface (9) is a physical surface separating a first operation space (100) from a second operation space (200), the first operation space (100) including at least one capturing area (11).
