Abstract (en)

[origin: WO2015015134A1] The present invention concerns a method for encoding an access to a computer resource, consisting of including, in a physical representation of the code, a first item of information encoded according to a first encoding type corresponding to the access path and to the identification of said computer resource, and capable of being decoded by a reader, characterised in that: - said physical representation further comprises an item of validity condition information encoded according to a second encoding type, corresponding to a validity condition of the access to said computer resource, - said validity condition information being capable of being decoded by an application installed on an element of the network including the reader of the physical representation, one or a plurality of gateways and the server that hosts said computer resource.
