Abstract (en)
[origin: WO2015015360A1] The invention relates to a cooktop device (10), particularly an induction cooktop device, having at least one heater arrangement (26), which has at least two heating elements (12), which are arranged next to each other and are provided at least to heat positioned cookware (14), and having at least one control unit (16). In order to provide a device of the type in question having improved properties in respect of a high degree of comfort for an operator, the control unit (16) determines, in at least one operating mode, a plurality of virtual heating zones (18) having different heat output density depending on a size of at least one positioned piece of cookware (14), wherein the virtual heating zones (18) are formed by heating elements (12) arranged adjacent to one another. which are suitable by the number and/or size thereof for using the cookware (14).
