Abstract (en)

[origin: CN105667535A] The invention relates to a hinge member (1) arranged in a roof area between two articulated vehicles. The hinge member comprises at least one female hinge area (6) and at least one male hinge area (8), wherein the male hinge area (8) and the female hinge area (6) are connected via a supporting body part (10) arranged in the male hinge area (8); the two hinge areas (6,8) are connected via a bend supporting member of a rotating shaft along a Z direction; the supporting body part (10) is provided with a housing (16); the housing (16) is supported on the male hinge area (8) via at least one elastic component in an X direction.
