Abstract (en)

A recreational water flotation device includes a central body defining an upper surface (110) and a bottom surface (112) and having a front end (114) and a rear end (116). A left lateral element (118) extends from a left end of the central body and defines a left canted surface canted toward the central body and further defines a left end of the flotation device. A right lateral element (120) extends from a right end of the central body and defines a right canted surface canted toward the central body and further defining a right end of the flotation device. The device is buoyant in water. A propeller can be mounted to the bottom surface of the central body.
