Abstract (en)

The sliding guide shoe for elevators comprises a base (1) defining a housing for the placement of an insert (2), and being characterized in that it further comprises fastening means (3) movable between a closing position, in which the insert (2) may not be removed from the housing thereof, and an opening position, in which the insert (2) may be removed from the housing thereof. It makes it possible to extract and place the insert without dismantling the sliding guide shoe from the elevator, by simply loosening the fastening means, thus preventing said fastening element from accidentally falling while the insert is being replaced.
