Abstract (en)

[origin: EP3029208A1] Electronic control system (1) for a shower facility and/or a domestic hot water bathroom that can immediately inform the user, by means of an illuminated colour code on an illuminated control device (8), the temperature range of the water coming out of the system (1), so that the user can intuitively know the water temperature without having to verify the numbers shown on the screen. Nevertheless, the illuminated control device (8) also displays a numeric code to indicate the exact water temperature. Additionally, when the system (1) is switched on, the default water temperature is set at 38°C, a comfortable water temperature, in order to avoid discomfort for the user with water temperatures that are either too high or too low. It is ideal for children and the elderly.
