Abstract (en)

The present invention relates to a seismic fixing device, particularly for prefabricated buildings, which comprises a slider (2) adapted to be moved along the vertical direction (10) substantially normal to the ground, by first guide means (7, 8, 12). The slider (2) is also adapted to be moved by second guide means (6, 9) along the horizontal direction (20) substantially normal to the vertical direction (10). Such first guide means (7, 8, 12) are associated with a wall (4) of a building, while the second guide means (6, 9) are associated with a floor (5) of the building. A feature of the invention is given by the fact that the second guide means (6, 9) are protruding from the floor (5).
