Abstract (en)

[origin: WO2015120830A1] A method for processing materials, in particular recycling material, consisting of composite materials or material composites, preferably composite film, consisting of at least two different substances (6, 7), wherein the substances (6, 7) have different softening or melting temperatures, comprising the following method steps: introducing the material into a processing unit (3), heating the material to a temperature at which the substance with the lower softening or melting temperature forms denser agglomerates, while the other substance retains its original state or changes only slightly, discharging the material from the processing unit (3). Furthermore, a device for processing materials, in particular recycling material, consisting of composite materials or material composites, preferably composite film, consisting of at least two different substances (6, 7), wherein the substances (6, 7) have different softening or melting temperatures, is claimed for carrying out a method.
