Abstract (en)
[origin: WO2015019122A1] The invention relates to a visualization system for a vehicle comprising at least one vision device (38) which is configured to show at least a section of the vehicle's surroundings. A sensor is configured to detect at least one object (14) in the section of the vehicle's surroundings. The visualization systems further comprises a positioning device configured to determine a position at least of a part of the driver's head within the vehicle relative to the at least one vision device (38). A control unit of the visualization system is configured to operate visualizing means in order to visualize the at least one object (14) in an orientation taking into account this position. The invention further relates to a vehicle with such a visualization system and to a method for operating a visualization system.
