Abstract (en)

[origin: CA2928694A1] The invention relates to a labelling device (1), in particular a pricing device, for providing a product (2) with a label (3), having at least one set of weighing scales (4) for weighing the product (2), having at least one handling system (5) for moving the product (2), and having at least one printer (6) for printing and dispensing labels (3), the printer having a label outlet (6.1). In order to reduce the complexity, the invention proposes that it be possible for the handling system (5) to be moved from a product-receiving position (I), in which the product (2) can be received by the handling system (5), to a first label-removal position (II), which is located adjacent to the label outlet (6.1) of the printer (6) and in which a first label (3) can be transferred to the product (2). The invention also relates to a labelling system (11) having a plurality of such labelling devices (1), and to a method for providing a product (2) with a label (3).
