Abstract (en)

[origin: WO2015018564A1] The invention relates to a device and a corresponding method for orienting containers (203) having a noncircular cross-section, in particular bottles, which are transported along a transport path (102) by means of neck handling, said device comprising at least one rotating device (211, 212) arranged along the transport path, characterised in that the rotating device is stationary and comprises one or more stationary, elastic rotating elements (221-225, 231-235), which are suitable for orienting a container (203) in a specified direction.
