Abstract (en)  
[origin: WO2015019207A1] A barrier (11) for infrastructures or constructions, preferably for separating lines of communication, such as railways, roads or highways, from the surrounding environment, comprising longitudinally spaced uprights (10), along the direction of extension of the barrier, which support corresponding panel means (13) of the barrier. The respective upright (10) comprises at least end wing- shaped means and there are means (15) for connecting panel means (13) to the respective upright (10). The connecting means (15) are designed to be inserted into a corresponding seat (17) provided in the means panel (13) and are preferably freely slideable along the upright (10).
