Abstract (en)

[origin: WO2015018409A1] The invention relates to an actuating device (100) for a friction clutch (1) actuated along an actuation path, comprising a actuating lever, which is actuated by a driving means at a input point (105) and which is accommodated at a support point (107) in a housing-fixed manner in such a way that the actuating lever can be rotated about a fulcrum and which axially acts on a lever spring of the friction clutch at an output point (106) in a rotationally decoupled manner. In order to be able to actuate the friction clutch in both directions, the input point, the support point, and the output point are designed to be axially force-transmitting in both directions.
