Abstract (en)

[origin: WO2015018733A1] The invention relates to a method for managing the heating of water in a tank (2) of a water heater (1) which comprises a device for electrically heating the water in the tank (2), characterized in that it comprises, when a water heating phase is actuated: activation of heating by the heating device, determination of a variation of the temperature in the tank (2) over time and determination of at least one filling level of water in the tank (2) depending on the variation over time.
