Abstract (en)

[origin: WO2015018732A1] The invention relates to a method and an operating device for operating an electronic device, in particular in a vehicle, via a touchscreen. A method according to the invention for operating an electronic device via a touchscreen, said operation being carried out on the basis of a position signal generated by an input movement which contacts the touchscreen, has the following steps: filtering the position signal such that at least one movement component of the input movement is at least partly suppressed, wherein a filtered position signal is obtained, and actuating the electronic device on the basis of said filtered position signal.
