Abstract (en)

[origin: US2016166075A1] A bed frame having flexible slats which are adjustable in a horizontal plane and having at least one bearing element for supporting one end of at least one flexible slat on a longitudinal beam of the bed frame is provided. The bearing element is movable over an arbitrary displacement path along the longitudinal beam. The bearing element includes a housing which accommodates the respective end of the flexible slat and in which at least one spring-loaded detent device, which is actuatable by hand, is situated and which engages with associated receiving profiles in the longitudinal direction of the longitudinal beam and is lockable at that location.
