Abstract (en)

[origin: US2016129395A1] The present invention provides a flue gas treatment system and a flue gas treatment method that enable the stable long-term operation of a plant by reducing NOx in a combustion flue gas and reducing the concentration of SO₃ more compared with that available conventionally. The flue gas treatment method of removing NOx and SO₃ in the gas that includes NOx and SO₃ includes a denitration and SO₃ reduction step of denitrating the gas and reducing SO₃ into SO₂, in which NH₃ as a first additive and a second additive including one or more selected from the group consisting of an olefinic hydrocarbon expressed by a general formula: C_nH_{2n} (n is an integer of 2 to 4) and a paraffinic hydrocarbon expressed by a general formula: C_mH_{2m+2} (m is an integer of 2 to 4) are added to the gas before bringing the gas into contact with a catalyst.
