Abstract (en)

[origin: WO2011061599A1] Machine to bend tubular elements (1 1) comprising bending means (12) provided with a bending arm (17) and a bend core (16) disposed, when in use, inside said tubular element (11). The bend core (16) comprises a support bar (19), a contrasting ogive (20) and a possible bend-follower element (21) disposed articulated at the head of the contrasting ogive (20). The machine also comprises movement means to move said tubular element (11) in a direction (F) toward said bending means (12) and cutting means (22, 122) to cut a segment of tube. The machine comprises holding means (15, 1 15) disposed on the perimeter around said tubular element (1 1) and configured to maintain said bend core (16) in a condition of suspension inside said tubular element (11).
