Abstract (en)
The apparatus includes a clamp lever 3 by which sheet products 1 are clamped near one edges thereof after being stacked. The clamp lever 3 is rotated at an angle of 180° so that the sheet products 1 are swung and turned over by the clamp lever 3. The apparatus further includes a horizontal member 13 by which the sheet products 1 are received and supported, a press bar 14 being pressed against the sheet products 1 and then moved along the sheet products 1. The sheet products 1 are therefore pushed and smoothed out by the press bar 14. The sheet products 1 are wrapped with a wrapper 17 after being smoothed out.
