Abstract (en)  
[origin: US2016160538A1] The invention relates to a door handle having a handle for a motor vehicle, which handle is arranged in a handle housing and which is displaceable from a rest position into an operating position by means of a rotation around a rotation axis, wherein a handle hook arranged on the free end of the rear side of the handle is kinematically coupled with a deflection lever, wherein the deflection lever directly or indirectly acts on a motor vehicle door lock when being displaced from the rest position into the operating position in order to effect a release of the lock and to enable opening the motor vehicle door, the handle hook comprising at least one guidance element by means of which the handle hook is guided in a corresponding profile of the handle housing, the guidance element performing a form-fit with the handle hook.
