Abstract (en)

[origin: WO2015107560A1] The present invention concerns a device (1) for washing a glass (B) comprising a supply duct (6) of a washing liquid, at least one dispensing member comprising at least one ring-shaped dispensing duct (11) having at least one hole (13) for the emission of a jet of said liquid, at least two radial connecting ducts (11 a), which connect said dispensing duct (11) to said supply duct (6), said at least two radial connecting ducts (11 a) laying on the same plane of said dispensing duct (11), so as to be capable of supporting the rim of said glass (B) when it is turned upside down, so that said at least one hole (13) of said dispensing duct (11) can emit a jet of liquid on the outer surface portion of said glass (B), and means for interrupting the flow (7, 7', 8b), for selectively interrupting the passage of said liquid through said supply duct (6) or through said dispensing duct (11).
