Abstract (en)
[origin: WO2015022142A2] The invention relates to a therapy device (1) for the postoperative treatment of body parts and (end) portions thereof, in particular the large toe, having a main part (3) and a moving segment (5) with a support surface (7) for supporting the body part to be treated. The moving segment (7) is mounted on the main part (3) in a pivotal manner about a pivot axis (S), and the main part (3) is designed to optionally bear an extremity support (9) on the left and right side.
