Abstract (en)
[origin: CN105708385A] The invention relates to a base station (1) for cleaning and/or clearing a vacuum cleaner dust collection chamber (5) of a first vacuum cleaner (3). The base station comprises a base station dust collection chamber (2), a first air inlet (7) and a first air outlet (8) which are connected with the dust collection chamber (2), wherein the first air inlet (7) and the first air outlet (8) are connected with an air channel (9) of the first vacuum cleaner (3), so that dust in the vacuum cleaner dust collection chamber (5) of the first vacuum cleaner (3) is conveyed into the base station dust collection chamber (2) by a fan (11) of the first vacuum cleaner (3). In order to provide the base station (1) capable of simultaneously connecting a plurality of vacuum cleaners (3, 4), the base station (1) comprises a second air inlet (12) connected with the base station dust collection chamber (2) and a second air outlet (13), the second air inlet (12) and the second air outlet (13) are connected with an air channel (10) of the second vacuum cleaner (4), so that the dust in a vacuum cleaner dust collection chamber (6) of the second vacuum cleaner is conveyed into the base station dust collection chamber (2). The invention also relates to a vacuum cleaner system (19) with the base station (1) and a method for cleaning and/or clearing the vacuum cleaner dust collection chamber (6).
