Abstract (en)
[origin: EP3034677A1] The invention relates to a door (14) for a laundry treatment apparatus, in particular for a dryer, washing machine or washer-dryer. The door comprises: a front frame (30) having a central opening; an inner window (60); a cover (50) adapted to prevent the inner window front side to be touched by a user; and a rear frame (70) having a central opening. The arrangement sequence is: front frame (30), cover (50), inner window (60) and rear frame (70). The cover (50) and either the front frame (30) or the rear frame form a door subassembly (100) by being mechanically connected to each other using at least one first connecting device (38/30) that engages the cover and either the front frame or the rear frame. The inner window (60) is arranged between the front frame (30) and the rear frame (70), and the front frame (30) and the rear frame (70) are mechanically connected to each other using at least one second connecting device (42/40) that engages the rear frame and front frame.
