Abstract (en)

[origin: EP3035770A1] The disclosure discloses a method and device for implementing a call service and a method and device for sending indication information. The method includes that: a current working mode is determined to be switched from a normal mode into a fail soft mode; and whether or not update of trunking group information and user information has been completed currently is judged, and a trunking group is determined belonged to, according to a judgment result, to perfrom a call service. According to the technical solutions provided by the disclosure, the trunking call service of a terminal may still be implemented under the condition that an LTE trunking system is switched from the normal mode to the fail soft mode.
