Abstract (en)  
[origin: WO2015018502A1] The invention relates to a wind deflector for a vehicle, with at least one housing element (26), with at least one deflector element (28) at least partially accommodated in the housing element (26), with at least one actuator (32), by means of which the deflector element (38) is movable in an oscillating manner linearly relative to the housing element (26) in at least one direction in space, and with at least one sealing element by means of which the deflector element (28) is sealed off at least in a partial region from the housing element (26), wherein the sealing element is designed as a flexible membrane (90) which is arranged on one side on the housing element (26) and on the other side on the deflector element (28) so as to be movable together therewith.
