Abstract (en)
[origin: WO2015024757A1] The invention relates to a laundry treatment apparatus (100) comprising a receiving device (102) into which a first functional component (104) and a second functional component (106) can be inserted. According to the invention, the receiving device (102) comprises a blocking element (108) which is designed such that, when the first functional component (104) is inserted, the second functional component (106) can be moved into the receiving device (102) up to a final position (E) and, when the first functional component (104) is not inserted, is designed such as to block movement to the final position (E).
