Abstract (en)  
[origin: WO2015025231A1] The invention relates to an iron (100), preferably an electric steam iron, comprising: a housing body (1); a base (2), which is attached to the bottom part of said housing body (1); a water storage tank (5), which is attached inside said housing body (1); and a water filling opening (3), which is attached to said housing body (1) and connected to said water storage tank (5) and which forms the water inlet opening (3) for pouring water into said water storage tank (5). The invention is characterized in that a soft cover element (6) is attached to the inner surface of said water filling opening (3). The invention thus advantageously further develops known irons (100) equally in the functional performance of the iron ("dripping-water protection") and in the aesthetic performance of the iron ("harmonious whole").
