Abstract (en)

[origin: WO2015025104A1] The invention relates to an assembly which includes two facing strips (1) which can be assembled edge-to-edge by self-locking socketing, and at least one linking element (2). Said linking element (2) comprises a first portion (20) suitable for being positioned in the groove (120) of a strip, and in contact with the inner surface (122a) of the rear lip (122). Once said first portion (20) has been positioned in the corresponding groove (120) of a strip, the two strips can further be coupled together, the first portion (20) of the linking element being clamped between the rear lip (122) and the tab (130) inserted in the groove, at least in one area for contact or near-contact (Z1) between the tab (130) and the rear lip (122) of the groove (120).
