Abstract (en)
[origin: WO2015024704A1] The invention relates to an air conditioning arrangement for a space (10), comprising at least one heat exchanger (14) with heat exchanger surfaces which delimits the space, and at least one fan arrangement (26, 28) that conveys air through the heat exchanger. In order to achieve a desired level of cooling using simple design measures, the at least one fan arrangement is an axial compressor (26, 28) in a cover (24) that closes off the heat exchanger surfaces of the heat exchanger.
