Abstract (en)

[origin: WO2015024749A1] The invention relates to a domestic appliance (1), in particular a domestic refrigeration device, comprising a body (2), a storage compartment (3) arranged in the body (2), and a door leaf (5), which is designed to open and close the storage compartment (3) and which is supported pivotably with respect to the body (2) by means of at least one bearing device (6), which has a bearing journal (31) and a bearing bush (18), which is slipped onto the bearing journal (31) and has a bearing surface (43) arranged concentric to a pivot axis (4) of the bearing device (6). In order to increase the functionality and flexibility of the bearing device and yet continue to create a reliable and long-life bearing device, the bearing device (6) according to the invention has an anti-rotation means (37) arranged radially outside of the bearing surface (43) for connecting the bearing bush (18) to the bearing journal (31) in a rotationally fixed manner.
