Abstract (en)

[origin: WO2015028114A1] The invention relates to a stationary device (1) for reducing the risk of a collision between vehicles. Said device (1) comprises: sensors (17) for monitoring at least two lanes of traffic in the region of a junction (2) and for detecting approaching vehicles (6, 9, 10); a memory (18) in which at least one desired speed profile associated with the device (1) is stored; said device (1) is designed to wirelessly transmit at least one piece of information relating to the desired speed profile by means of an emitting device (19), said information can be captured by a vehicle (6, 9, 10) approaching the device (1).
