Abstract (en)

[origin: WO2015027991A1] The invention relates to an electrical contact element for the clamping connection of a stranded conductor, comprising: a hollow-cylindrical contact pin having a clamping sleeve portion which comprises a receiving chamber; and a clamping element for clampingly holding a stranded conductor end, said clamping element being axially movable back and forth relative to the clamping sleeve portion. The clamping element can be moved from a stranded conductor insertion position to a stranded conductor clamping position by turning a screw that is coupled to the clamping element or that can be actuated by means of the clamping element.
