Abstract (en)  
[origin: WO2015025050A1] The invention relates to a method for generating a data packet (43) to be transmitted in a vehicular ad hoc network (1), said data packet containing a message (17) to be transmitted in the vehicular ad hoc network (1). The method comprises the following steps: retrieving an existing data packet (43') containing a message (17) already packed in the data packet (43'); determining a section (56) in the existing data packet (43') in which the already packed message (17) and the message (17) to be transmitted differ from one another; and replacing the determined section (56) in the existing data packet (43') in order to change the already packed message (17) into the message (17) to be transmitted and to generate the data packet (43) to be transmitted.
