Abstract (en)
The invention relates to a door guiding device for a door (2) of a wagon (3), being displaceable, in the mounted condition, along a plug axis (Y) substantially vertical to the plane of a door panel (22) mounted to the door guiding device (1, 1'), between a retracted position and an extended position, and comprising a door panel mount (12; 12'; 12''), which is connectable with the door panel (22), a drive carriage (10; 10') slidably supporting the door panel mount (12; 12'; 12'') by means of a first linear guiding device (13; 13'), and a carrier (11; 11') slidably supporting the drive carriage (10; 10') by means of a second linear guiding device (14; 14'). It is provided that in the extended position of the door guiding device (1; 1'), one of the first and second linear guiding devices (13, 14; 13', 14') is located outside an interior (34) of the wagon (3) defined by an outer surface (33) of the wagon (3), while the other one of the first and second linear guiding devices (13, 14; 13', 14') is at least partially located inside of the interior (34) of the wagon (3).
