Abstract (en)

[origin: EP3037363A1] Device for the separate conservation of a first substance to be mixed with a second substance contained in a bottle (6) and for simultaneously closing said bottle comprising a generally concave plug (2) that comprises a substantially cylindrical or frusto-conical portion (21) and an edge portion (22) suitable for making a seal on the mouth (5) of said bottle (6). Inside said substantially cylindrical or frusto-conical portion (21) a cavity (25) is formed, also preferably cylindrical or frusto-conical, in which a fracturing element (3) is inserted, which for this purpose is externally shaped so as to match the cavity itself. Said fracturing element is hollow inside to contain the first substance and a membrane (4) is fixedly connected to the plug so as to close the cavity (25). Said fracturing element has a fracturing tip or edge (34) suitable for penetrating and perforating said membrane when it moves downwards.
