Abstract (en)

The invention relates to an identification device (5) for a remote control arrangement of a vehicle (9), comprising a first communication module (6a) configured for wirelessly transmitting a remote control signal (15) to the vehicle (9), a second communication module (6b) configured for wireless communication with a control device (3), and having an energy supply unit (8) configured for generating electrical energy out of the wireless communication with the control device (3) for supplying the first communication module (6a) with that generated electrical energy, wherein the first communication module (6a) and the second communication module (6b) operate at different frequencies and to a remote control arrangement (1) for a vehicle (9) comprising such an identification device (5).
