Abstract (en)

[origin: WO2015031897A1] A finished tobacco product is formed by a pre-rolled smokable sheet having opposed edges with one of the edges having a plurality of openings for effecting a seal without additional adhesive or glue, pulling apart the opposed edges, filling the exposed bore or volume with a user's selected tobacco filler, allowing the rolling memory to close the bore or volume and contain the tobacco filler, bringing together the opposed edges such that the plurality of openings on one edge extends over the opposed edge, pushing together the two edges causing a seal, where the plurality of openings on one of the opposing edges of the pre-rolled sheet is used to effect the seal without additional glue or adhesive.
