Abstract (en)

[origin: WO2015028244A1] The invention relates to a fitting (2) with a pivoting-forwards mechanism for positioning a backrest (1.1) of a vehicle seat (1) into at least one forward position, a comfort lock for positioning the backrest (1.1) into at least one seat position (A to C) in a comfort region, and an expanded comfort function for positioning the backrest (1.1) beyond the front position into a loading platform position (E), comprising at least one fitting part (2.1, 2.2) and a driver (4), wherein a pivoting range of the backrest (1.1) is limited in the forward position by means of an easy-entry latch (5) engaging in the at least one fitting part (2.1), wherein the easy-entry latch (5) is designed in such a manner that, when the backrest (1.1) is adjusted between the seat positions (A to C) in the comfort region, said easy-entry latch bears against a stop (7) mounted on the backrest and, in the forward position, is prevented by means of the stop (7) from pivoting further forwards, and, when the backrest (1.1) is set upright from the forward position into one of the seat positions (A to C), is pivoted in a manner controlled by means of the stop (7).
