Abstract (en)

[origin: WO2015043904A2] The invention relates to a device (105) for monitoring, from the infrastructure side, the position of a stabled rail-based vehicle (103), said device comprising: a detector (111) for detecting, from the infrastructure side, a change of location of the stabled vehicle (103) and a communications device (115) which is designed to communicate the detected change in location via a communications network (109) to a user (107) of said communications network (109). The invention further relates to a corresponding method, to a corresponding system, to a method for operating said system and to a computer program.
