Abstract (en)
[origin: WO2015030584A1] The invention relates to a drainage arrangement, comprising at least a first member and a second member. The first and second member are adapted to form a drainage body together and to be nested in each other. Each member of the first and second member comprises a substantially planar base and a wall having an outer surface, which is divided into a first part, a second part and a third part. The first part is connected to an edge of said base and arranged in a first direction. The second part is connected to said first and third part and arranged in a second direction, different from said first direction. The third part is arranged in a third direction, different from said second direction, and extends further than said first part in a direction parallel to said base.
