Abstract (en)

[origin: WO2015028050A1] The present invention proposes a method for controlling and/or configuring a user-specific hearing system (3) by means of a computing and/or communication device (2), where the hearing system (3) comprises at least one hearing device (4) customisable according to the individual hearing ability and/or preferences of a user (6) of the hearing system (3). The proposed method comprises connecting the hearing system (3) to a server (1) via a network (7), connecting the computing and/or communication device (2) to the server (1) via the network (7), providing by the server (1) a hearing system control and/or configuration service tailored to the user-specific hearing system (3) to the computing and/or communication device (2), determining and/or selecting at the computing and/or communication device (2) control data and/or configuration data using the hearing system control and/or configuration service, sending the control and/or configuration data from the computing and/or communication device (2) to the hearing system (3), and adjusting the hearing system (3), in particular the at least one hearing device (4), based on control and/or configuration data received at the hearing system (3).
