Abstract (en)

A storage case (100) for an electronic device includes a front panel (110) and a back panel (120) attached to the front panel along a first side, a second side, and a bottom edge, forming an interior (150). The front and back panels include an outer layer (160), an inner lining (164), and a foam layer (162) disposed between the outer layer and the inner lining. A protective bumper (200) extending along a length of the interior is disposed between the front panel (110) and the back panel (120) and between the first side and the second side. The protective bumper (200) can have a cushioning member (202) and an attachment element (210) extending below the cushioning member. A seam (220) along the bottom edge can attach the front panel (110), the back panel (120), and the attachment element (210) of the protective bumper (200) so that the protective bumper is affixed within the interior of the storage case.
