Abstract (en)

A holder for a cleaning pad or the like can include a base and one or more features to inhibit damage to a surface adjacent a surface being cleaned. For example, the holder can include a lip extending downwardly from an edge of the base along one or more sides to inhibit the pad from being coupled to the holder so that the pad extends beyond the edge of the base. The holder can also include one or more contacting features extending outwardly from the base on the side(s) including the lip to space the base and lip from the adjacent surface during use. The contacting features can be one or more wheels horizontally disposed on a top surface of the base.
