Abstract (en)

[origin: EP3040469A1] The present invention provides a laundry drying rack, which comprises: a protruding-and-bent laundry hanger drying device including a mounting frame and at least two laundry hanger transverse units, the at least two laundry hanger transverse units protruding downward from the mounting frame and being spaced apart from each other in the transverse direction and in the longitudinal direction; and a supporting means for supporting the protruding-and-bent laundry hanger drying device. Therefore, the present invention provides an advantageous effect of preventing, when a user hangs many pieces of laundry on the laundry drying rack in order to simultaneously dry them, the user's hand or the laundry from being caught in a drying pole support frame, thereby enabling the user to make the laundry be instantly widened on a laundry hanger by hanging the laundry on the laundry hanger in a state where the user widens and holds both sides of the upper part of the laundry.
