Abstract (en)
A light weight stove for cooking and/or heating is provided with a burning chamber, and an outer shell surrounding the burning chamber. The burning chamber is detachably supported in a air space within an inner wall of the outer shell. The burning chamber is now a detachable part of the stove and can be taken out of the stove and carried by any person, in order to empty the lose chamber with its ash in a safe storage place. Due to the low weight of the burning chamber emptying is easy and can be done without spilling or the forming of annoying and harmful dust ash clouds. Advantageously this does not require any transport of the stove as a whole.
