Abstract (en)

[origin: WO2015028762A1] The invention concerns a bra (1) comprising two cups (2) intended to accommodate the breasts of a user in which each cup (2) consists of a piece of extensible textile material in the form of a substantially planar sheet (21) when the bra is not being worn, a major part of the surface of the sheet (21) being cut with a plurality of notches (22) of a limited length disposed all around an inner part (23) of the sheet (21), so as to form a reversibly deformable structure suitable for being deployed towards the front in a direction essentially transverse to the plane of the sheet (21) under the effect of the weight of the breasts when the bra is being worn, causing said sheet (21) to assume a volume matching the shape of the breasts and capable of supporting the breasts.
