Abstract (en)

[origin: WO2015035109A1] A patient support and transport system for a multi -modality medical suite includes a track system with one track in one room aligned with another track in another room. A support carriage coupled to the track system and configured to move between the two rooms. A duplex socket interface module attached to the support carriage and flexible raceway including a first conduit management system coupled to the support carriage and configured to automatically couple with and decouple with the duplex socket interface module. A second conduit management system is coupled to electrical and data ports and include a conduit interface module configured to automatically couple with and decouple with the duplex socket interface module. The patient support and transport system also includes a vertical support member coupled to the support carriage and a support assembly coupled to the vertical support member configured to selectively articulate a patient bed.
