Abstract (en)

[origin: WO2015035238A1] A medical article, such as a catheter, is secured with respect to a patient with a securement device. The securement device may include a retainer and anchor pad. Certain devices may further include, for example, straps, flaps, dressings, slots, and recesses for securing the medical article to the patient. The retainer may include a recess and/or a channel. At least one surface of the retainer may be coated with an adhesive. A support member may be coupled to the retainer. The support member may include a channel configured to receive a proximally extending portion of the medical article.
